

## FY 2017 State and Regional Primary Care Association (PCA): Data Resource Guide

### Overview

Applicants must explain the pre-populated baseline data, propose goal targets, and develop training and technical assistance activities to address all Goals listed below. Baseline data in the Project Work Plan is pre-populated with Health Center Program award recipient data for the state/region selected on Form 1A and may not be edited. If additional baseline data is available from other sources (e.g., state-level surveys), applicants may describe the supplemental data in other sections of the Project Work Plan form (e.g., baseline narrative, key factors) and in the Need section of the Project Narrative.

See the Program Requirements section of the PCA funding opportunity announcement (available on the [PCA Technical Assistance website](#)) for more information on the required Goals, and Appendix A for instructions on completing the Project Work Plan.

### Resources

Access the following resources as needed for information on Health Center Program data:

- Main Health Center Program data and reporting website:  
<http://bphc.hrsa.gov/datareporting/index.html>
- Uniform Data System (UDS) resources website:  
<http://bphc.hrsa.gov/datareporting/reporting/index.html>

PCA Goal	Baseline Data Resource
Increase the number of patients receiving care in health centers, including special and vulnerable populations.	Pre-populated baseline data represents the total number of unduplicated patients receiving care from health center award recipients in the selected state/region as reported in the 2015 UDS report.
Increase the number of health centers providing comprehensive services, including medical, oral health, behavioral health, vision, and enabling services.	Pre-populated baseline data represents the total number of health center award recipients providing comprehensive services, which include: medical, oral health, behavioral health, vision, and enabling services in the state/region as reported in the 2015 UDS report.
Increase health center achievement of patient-centered medical home (PCMH) recognition and/or optimization of the PCMH model if the state or region has achieved 100 percent recognition.	Pre-populated baseline data represents the percentage of health center award recipients with PCMH recognition in the state/region, as reported in the July 1, 2016 quarterly PCMH report.

PCA Goal	Baseline Data Resource
<p>Increase the percentage of health centers with a cost increase less than the national average.</p>	<p>Pre-populated baseline data represents the percentage of health center award recipients in the state/region with a percent increase in cost per patient as reported in the 2015 UDS that is less than 80 percent of the CMS National Health Expenditure rate (NHE).<sup>1</sup> Results for this measure include health centers with growth in total cost per total patient rates below 80 percent of the NHE growth rate for 2014 – 2015.</p>
<p>Improve diabetes care health outcomes and disparities.</p>	<p>Pre-populated baseline data represents the percentage of health center award recipient patients with A1c greater than 9 percent in the state/region as reported in the 2015 UDS.</p>
<p>Improve health outcomes and disparities for hypertension control (one of three options for Goal 2 under Focus Area 3).</p>	<p>Pre-populated baseline data represents the percentage of health center award recipient patients 18-85 years of age with diagnosed hypertension whose blood pressure was less than 140/90 at the time of the last reading in the state/region as reported in the 2015 UDS.</p>
<p>Improve health outcomes and disparities for colorectal cancer screening (one of three options for Goal 2 under Focus Area 3).</p>	<p>Pre-populated baseline data represents the percentage of health center award recipient patients aged 51-74 who had appropriate screening for colorectal cancer in the state/region as reported in the 2015 UDS.</p>
<p>Improve health outcomes and disparities for cervical cancer screening (one of three options for Goal 2 under Focus Area 3).</p>	<p>Pre-populated baseline data represents the percentage of female health center award recipient patients 24-64 years of age who received one or more tests to screen for cervical cancer in the state/region as reported in the 2015 UDS.</p>
