| 6B    | 11           | Cervical Cancer Screening | CMS124v10 | Percentage of women 21*–64 years of age who were screened for cervical cancer using either of the following criteria:  
  • Women age 21*–64 who had cervical cytology performed within the last 3 years  
  • Women age 30–64 who had human papillomavirus (HPV) testing performed within the last 5 years  
  Note: *Use 23 as the initial age to include in assessment. | Women 23 through 64 years of age with a medical visit during the measurement period | Women with one or more screenings for cervical cancer. Appropriate screenings are defined by any one of the following criteria:  
  • Cervical cytology performed during the measurement period or the 2 years prior to the measurement period for women who are at least 21 years old at the time of the test.  
  • Cervical HPV testing performed during the measurement period for women who are 30 years or older at the time of the test.  
  Exclusions:  
  • Women who had a hysterectomy with no residual cervix or a congenital absence of cervix  
  • Patients who were in hospice care for any part of the measurement period  
  • Patients who received palliative care during the measurement period | 52.95% | Added palliative care as a denominator exclusion | None |
| 6B    | 11a          | Breast Cancer Screening | CMS125v10 | Percentage of women 50*–74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period  
  Note: *Use 51 as the initial age to include in assessment. | Women 51 through 73 years of age with a medical visit during the measurement period | Women with one or more mammograms during the 27 months prior to the end of the measurement period | Exclusions:  
  • Women who had a bilateral mastectomy or who have a history of a bilateral mastectomy or for whom there is evidence of a right and a left unilateral mastectomy  
  • Patients who were in hospice care for any part of the measurement period  
  • Patients aged 66 or older who were living long-term in an institution for more than 90 consecutive days | 46.29% | Added palliative care as a denominator exclusion | None |

| 6B    | 12           | Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents | CMS155x10 | Percentage of patients 3-17 years of age who had an outpatient medical visit and who had evidence of height, weight, and body mass index (BMI) percentile documentation and who had documentation of counseling for nutrition and who had documentation of counseling for physical activity during the measurement period |  | Children and adolescents who have had:  
  • Their height, weight, and BMI percentile recorded during the measurement period and  
  • Counseling for nutrition during the measurement period and  
  • Counseling for physical activity during the measurement period |  | 68.72% | None |

Note: *Use age 16 as the final age at the start of the measurement period to include in assessment.

Patients 3 through 16 years of age with at least one outpatient medical visit during the measurement period.

Exclusions:

• Patients who have a diagnosis of pregnancy during the measurement period
• Patients who were in hospice care for any part of the measurement period

68.72%  

None  

eCQM denominator is limited to outpatient visits with a primary care physician or OB/GYN. UDS includes children seen by NPs and Pas  
• Numerator BMI, nutrition, and activity are reported separately in the eCQM, but combined in the UDS

| 6B    | 17a          | Statin Therapy for the Prevention and Treatment of Cardiovascular Disease | CMS347 v5 | Percentage of the following patients at high risk of cardiovascular events who were prescribed or were on statin therapy during the measurement period:  
- All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure, or  
- Patients 20 years of age or older who have ever had a low-density lipoprotein cholesterol (LDL-C) laboratory result level greater than or equal to 190 mg/dL or were previously diagnosed with, or currently have an active diagnosis of familial hypercholesterolemia, or  
- Patients 40 through 75 years of age with a diagnosis of Type 1 or Type 2 diabetes  
Include patients of any age for the ASCVD determination; patients with birthdate on or before January 1, 1947, and birthdate on or after January 1, 1982 for diabetes determination | Patients who were previously diagnosed with, or currently have an active diagnosis of ASCVD, including an ASCVD procedure, or patients who were 20 years of age and older at the start of the measurement period who:  
- ever had a laboratory result of LDL-C greater than or equal to 190 mg/dL  
- were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia, or  
- Patients 40 through 75 years of age with Type 1 or Type 2 diabetes; with a medical visit during the measurement period  
Exceptions:  
- Patients with statin-associated muscle symptoms or an allergy to statin medication  
- Patients who are receiving palliative or hospice care  
- Patients with active liver disease or hepatic disease or insufficiency  
- Patients with end-stage renal disease (ESRD) | Patients who are actively using or who received an order (prescription) for statin therapy at any time during the measurement period  
Exclusions:  
- Patients who have a diagnosis of pregnancy at any time during the measurement period  
- Patients who are breastfeeding at any time during the measurement period  
- Patients who have a diagnosis of rhabdomyolysis at any time during the measurement period  
Exceptions:  
- Patients with statin-associated muscle symptoms or an allergy to statin medication  
- Patients who are receiving palliative or hospice care  
- Patients with active liver disease or hepatic disease or insufficiency  
- Patients with end-stage renal disease (ESRD) | 73.10% | Changes to denominator:  
- criteria for ASCVD component was changed from age 21 and older to all patients with ASCVD  
- for patients with LDL-C ≥ 190 mg/dL, the age changed from 21 and older to 20 and older  
- for patients with diabetes, the LDL-C level of 70-189 mg/dL criteria was removed  
- Added hospice care as a denominator exception  
- Removed denominator exception: patients 40 through 75 years of age with diabetes whose most recent fasting or direct LDL-C laboratory test result was less than 70 mg/dL and who are not taking statin therapy | None |

| 6B    | 19           | Colorectal Cancer Screening | CMS130v10 | Percentage of adults 50–75 years of age who had appropriate screening for colorectal cancer | Patients 50 through 74 years of age with a medical visit during the measurement period | Patients with one or more screenings for colorectal cancer. Appropriate screenings are defined by any one of the following criteria:  
  - Fecal occult blood test (FOBT) during the measurement period  
  - Fecal immunochemical test (FIT)-deoxyribonucleic acid (DNA) during the measurement period or the 2 years prior to the measurement period  
  - Flexible sigmoidoscopy during the measurement period or the 4 years prior to the measurement period  
  - Computerized tomography (CT) colonography during the measurement period or the 4 years prior to the measurement period  
  - Colonoscopy during the measurement period or the 9 years prior to the measurement period | Exclusions:  
  - Patients with a diagnosis of colorectal cancer or total colectomy  
  - Patients who were in palliative or hospice care for any part of the measurement period  
  - Patients aged 66 or older who were living long-term in an institution for more than 90 consecutive days during the measurement period  
  - Patients aged 66 and older with frailty for any part of the measurement period: advanced illness (with one inpatient visit or two outpatient visits) or taking dementia medications during the measurement period or the year prior | 41.93% | None | None |
